

★ National Center for TeleHealth and Technology ★

★ ABOUT T2 ★

The TeleHealth and Technology (T2) Directorate and Center leverages high-tech and high-touch technologies to help service members with PH and TBI. Physically located onboard Ft. Lewis in Washington State, the T2 Center is responsible for managing TeleHealth and technology programs within DCoE's mission. The T2 Directorate is a touchstone for the T2 Center and has a small staff at the DCoE in the National Capitol region. Both are headed by the same Director and share a single vision. While many of the current programs grew out of successful programs at Madigan Army Medical center, the T2 is truly joint in its thought, word and deed.

★ T2 MISSION ★

The National Center for TeleHealth and Technology is committed to operating a comprehensive program to develop, evaluate, research, standardize and deploy new and existing technologies for psychological health (PH) and traumatic brain injury (TBI). T2 also serves as the principal resource for the DoD and other stakeholders for the application of technology to the areas of PH and TBI.

★ T2 GOALS AND OBJECTIVES ★

To achieve this mission, T2 has established the following goals and objectives:

- Develop PH and TBI telehealth standards, processes and review mechanisms.
- Act as a DoD resource for utilization of advanced technologies for PH and TBI care.
- Coordinate telehealth services to educate, prevent, screen, assess and treat PH and TBI by researching, evaluating, validating and deploying technological approaches to PH and TBI care.
- Train PH and TBI providers on best practice treatment and prevention approaches using state-of-the-art technological applications.
